Title: Mediterranean Diet and wine intake could improve atrial function in patients with atrial fibrillation

Article Type: Letter to Editor (LED)

Corresponding Author: Professor Anna Vittoria Mattioli, MD, PhD, FACC

Corresponding Author's Institution: University of Modena and RE

First Author: Anna Vittoria Mattioli, MD, PhD, FACC

Order of Authors: Anna Vittoria Mattioli, MD, PhD, FACC; Alberto Farinetti; Roberta Gelmini

Manuscript Region of Origin: ITALY

CONFLICT OF INTEREST STATEMENT - *HeartRhythm* (First and Corresponding Author(s) Must Sign)

Thank you for your submission to the *HeartRhythm* journal. **CONFLICTS OF INTEREST FOR ALL AUTHORS MUST BE STATED ON THE TITLE PAGE.** Please have the first and corresponding author(s) sign and upload with your manuscript submission. Its purpose is to inform all interested parties of any significant affiliations or relationships you may have with any commercial enterprise or any other potential conflicts of interest. This is a standard form required by most leading journals.

1. Were you loaned any equipment, materials or medication for this study?
Yes ☐ No ☒ Explain _____
2. Were you given any equipment, materials or medication for this study?
Yes ☐ No ☒ Explain _____
3. Did you receive any funding to support your research for this article?
Yes ☐ No ☒ Explain _____
4. Were you provided with any honoraria, payment or other compensation for your work on this study?
Yes ☐ No ☒ Explain _____
5. Did you receive any stock options, stock ownership or other valuable materials in conjunction with this study from any source whatsoever?
Yes ☐ No ☒ Explain _____
6. Did you receive any outside financial support for travel or lectures to present the information covered in this study?
Yes ☐ No ☒ Explain _____
7. Do you have any financial relationship with any entity that may closely compete with the medications, materials or instruments covered by your study?
Yes ☐ No ☒ Explain _____
8. Do you own or have you applied for any patents in conjunction with the instruments, medications or materials discussed in this study?
Yes ☐ No ☒ Explain _____
9. Do you receive any compensation for any therapy discussed in your article?
Yes ☐ No ☒ Explain _____
10. Does anyone in your immediate family have a conflict of interest that would be covered by any of the above questions? (This would include closely held family trusts, limited liability corporations, etc.)
Yes ☐ No ☒ Explain _____

If you have any doubts about the nature of your conflict, please contact Peng-Sheng Chen, MD, Editor-in-Chief.

To Editor

Heart Rhythm

Dear Editor

Please find enclosed the Letter entitled ‘**Mediterranean Diet and wine intake could improve atrial function in patients with atrial fibrillation**’

which I wish to submit on behalf of my fellow authors for consideration for publication in **Heart Rhythm**

Letter related to “Voskoboinik A, Wong G, Lee G, et al. Moderate alcohol consumption is associated with atrial electrical and structural changes: Insights from high-density left atrial electroanatomic mapping. Heart Rhythm 2019; 16, 251–259.”

All authors participated in the study, have reviewed the letter and have approved the content.

I look forward to hearing from you in due course.

Yours sincerely

Anna Vittoria Mattioli

Dear Editor,

We have read with great interest the paper “Moderate alcohol consumption is associated with atrial electrical and structural changes: Insights from high-density left atrial electroanatomic mapping.” by Voskoboinik A and coworkers [1] and we found it of importance with a view to clinical prevention. This study found that regular moderate alcohol consumption, but not mild consumption, is an important modifiable risk factor for atrial fibrillation (AF).

With reference to the findings reported in the paper, we would like to make the following contribution to the discussion. It has been suggested that there would be a synergy among the antioxidants-rich foods of the Mediterranean diet that fosters favorable changes in intermediate pathways of cardio-metabolic risk factors. [2,3]

In previous paper we found that high adherence to Med Diet is associated with spontaneous conversion of AF. [4] Wine intake was specifically evaluated but no relationship was found. The wine includes other components besides the alcohol; especially polyphenols, a class of antioxidants that prevents cardiovascular disease and cancer. [4,5]

In the Mediterranean lifestyle, wine is usually consumed during meals and, it is our opinion, that a synergistic action is created with food and food antioxidants so as to determine beneficial effects on health. [4,5]

Recently Honarbakhsh found that structural remodeling results in heterogeneous CV dynamics, which are determined largely by the degree of atrial disease. [6]. Lifestyle, specifically nutrition could influence the structural remodeling of atria and could be useful to prevent the development of arrhythmia.
